Steam Machinery for Screw Propeller Sloops-of-War at the U. S. Navy Yards of Ports-month, N. H., Boston, New York, Philadel-phia, Gosport, and Pensacola.

NAVY Peranymer, July 26, 1818.

NAVY PREVENCE, July 26, 1838.

CEALED PROPOSALS, endorsed "Proposals for received at this department until 3 o'clock, p. m., of the eighth of September users, for the complete construction of the steam machinerry and appendages, and placing the same on board, for each of the screw dioqueckwar building at the U.S. navy yards at Portemonth, N. H., New York, Philadelphia, and Gosport in accordance with the following conditions:

The offers must be far a specific sum for putting the whole in successful operation, must include all patent fees, and the department will require a release from the proprietors of any patented article or arrangements used in or about the machinery and must state the time in which the work will be completed, and must be accompanied by the usual guarantee required by law.

The name of the establishment in which the work is to be executed must be stated. The density of the design and arrangement of the machinery will be left with the party whose proposition may be accepted as combining the greatest number of advantages, keeping in view cost, straphicity of construction, readiness of acobas for adjustment when in operation, and not being subject to derangement in the work in party; it being the object of the department to procure machinery which can increding great power when required as one to insure high speed for as many days as possible, while at the same time they will be athe to proped the vessel at a indercate speed with great conomy of fact, so that long vorages may be performed while one apply a fuel.

With this view, the department will expect the bidders to guaran-

be able to proped the vessel at a moderate speed with great economy of fuel, so that long voyages may be performed with one supply of coal.

With this view, the department will expect the bidders to guaranty the results proposed to be accomplished by their plans, and to specify these results under the following beats:

1st. The amount of house power which the engines and botters will be able to develop for five days consecutively when driven up to their highest capacity, to be measured on beard the vessel by the indicator, at the rate of 33,600 pounds fifted one foot high in a minute and to be not less than 1,000 horse-power, and at least 80 revolutions per minute. The consumption of coals per horse power per hour must be stated. The pressure in pounds per square into not the piston necessary to work the engines without a load, vacept the line of staffing, must not exceed 25; pounds per square inch of piston by indicator diagram.

1d. The quantity of equil which can be stowed in the ship without occording the total weight of 400 tons for machinery, appendages, bodiers and water in them, bunkers, tools, square pieces, and coal within the length occupied by the engines and boilers. The boilers to be of iron of the multitubular kind, with brase tubes and with telescopic smoke pipe, and, as it is intended to use fresh water in the boilers, a surface condenser of the most approved kind will be required.

The pumpeller with the connexions for hoisting it will be of composition; to be properly proportioned for at least 80 revolutions per minute and for the immersed anniability section of the vessel.

The pumpe, apparatus for remittating, and appartenances of all kinds necessary for the perfect working of the whole to be of the most approved kinds.

approved kinds.

The coal bunkers, shaft passage, two athwartship iron bulk hoads, distilling apparatus for fresh water, from which can be made not ext than 500 gailons per day, and the tools and duplicate pieces uses, vary and satisfactory for an efficient cruising steam sloop of war, must be included in the proposition, and a list of them must be fur-isshed.

le se thou 500 gailons per day, and the tools and duplicate pieces necestary and satisfactory for an efficient cruising steam sloop of war, must be included in the proposition, and a list of them must be furnished.

The vood and carpenter work, except the boring out the deadwood for the shaft necessary to adapt the vessel for the reception of the machinery, bodiers, and appendages will be provided at the expense of the Navy Department, and it will permit the use of such facilities as it may have for hoising the heavy machinery on board.

For the accommodation of the entire steam machinery and the fuel there will be allowed in the bady of the ship, the entire space under the spar deck commencing at 15 feet about the main mast, and thence extending forward a distance of 50 feet.

Within this space it is expected to carry coal for five days' steaming at the maximum speed.

In the specifications, the daily consumption of fuel will be staled; also the weight of the muchinery, coal, bodiers, water in them, shaft, propeller and appendages, with tools and sparce work, all of which must not exceed 400 tools of 2,240 pounds.

The distance from the after side of the mainmast to the after side of the forward stern pest will be about 80 feet, and the distance between the forward and the after stern posts will be seven feet. The depth from the load water line to the top of the keel under the propeller will be 12 feet 1 meb.

The proposal most be accompanied by full specifications and general drawings, having the position of the centre of gravity or the machinery, bodiers, &c., marked on them, giving also the capacity of the machinery, bodiers, &c., marked on them, giving also the capacity of the steam, a plunder, pressure of steam, area of foot and delivery valves, and of xir pump and emboard delivery valves, space for steam above the water line of the boilers, the fire and grate surface, also the diameter, pitch, surface, and kind of propeller and other principal points, that comparisons can readily be made.

The terms of p

load water line to the by
selection of any one of the vessels upon making application to the

section of any one of the vessels upon making application to the

UNITED STATES PATENT OFFICE,
Wassington, August 31, 1858.
ON THE PETITION of Henry Stanley, of Albany, New York, praying for the extension of a patent granted to him on the 4th of January 1845, for an improvement in "coal stoves," for seven years from the expiration of said patent, which takes place on the 4th day of January, 1859.

It is ordered that the said petition be heard at the Patent Office on Monday, the 20th of December next, at 12 o'clock, ut., and all persons are notified to appear and show cause, if any they have, why said petition ought not to be granted.

Persons opposing the extension are required to file in the Patent Office their objections, specially set forth in writing, at least twenty days before the day of hearing; all testimony filed by either party to be used at the said hearing must be taken and transmitted in accordance with the rates of the office, which will be formished on application.

The testimony in the case will be closed on the 6th of December; depositions, and other papers relied upon as testimony, must be filed in the office on or before the morning of that day; the arguments, if any, within ten days thereafter.

Ordered, also, that this notice be published in the Union, Washington, D. C., and Bully Nows, New York, once a week for three weeks; the first of said publications to be at least sixty days before the 20th of December next, the day of hearing.

308, HOLT.

Commissioner of Patenta.

P. S.—Editors of the above papers will please copy, and send their sits to the Patent Office, with a paper containing this notice. BOOKS IMPORTED BY ATLANTIC TELE-GRAPH.
